

Design 1: Page design (Weekly)

Page Design (Daily)

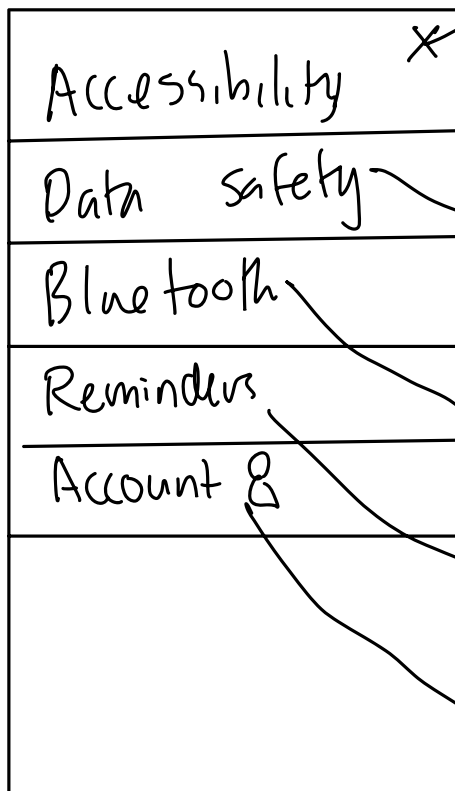

Info page (possibilities)

go over benefits, and tips/ideas to get better sunlight
provide links to research?

Can also help with questions like cloudy/bright sun effectiveness in myopia management

Settings page (possibilities - not in order)

Accessibility is incredibly important when considering an app about visual impairment

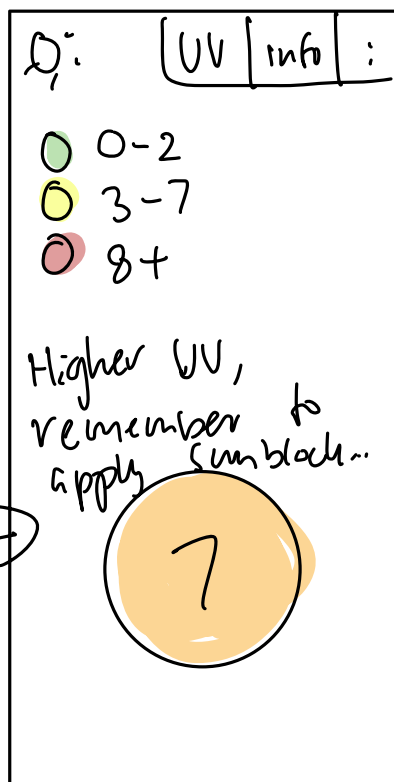

Help inform parents on the measures made to protect their kids

connect device through settings

whether or not weekly updates are sent through... etc..

Account set up → further considerations - like multiple children.

"UV" page (stretch goal*)

* Would have to consider whether or not real time data would have to be had to make feature work

possible just overview of UV data from week

perhaps low on list of considerations

Design 2: Scrolling type design

Back to Top

Brings user back to weekly overview

Daily overview as mini-rings (consistent)

Detailed overview by hour
Pop up when mini ring is clicked on.

Scroll down further for more information on UV

information
Myopia management

other benefits
